

TLC Rents takes great pride in teaming up with innovative companies that design, fabricate and deliver exciting products that bring innovation and style to your table.

Acrylic has an excellent coefficient of light transmission, which endows it with unusually high optical clarity—acrylic is up to eight times clearer than glass. Our acrylic platters may be susceptible to minor inclusions which will not detract from their beauty, but will enhance their personality.

To keep our platters in pristine condition please read:

- Simply wash with soft cloth, soap and water.
- Avoid sharp knives or sharp instruments.
- Topical scratches can mostly be removed with a dab of toothpaste, soft cloth, and a little muscle.
- Please DO NOT clean with Windex or any type of ammonia or organic solvents such as acetone or alcohol.
- Do not put in the dishwasher or oven. Acrylic can take heat up to 160 degrees Fahrenheit.
- Due to our designs, some pieces may have sharp edges, so please use caution when handling, especially around small children.
